Kepada:

**PROGRAM STUDI DOKTOR ILMU KEHUTANAN
FAKULTAS KEHUTANAN
UNIVERSITAS MULAWARMAN
SAMARINDA
2018**

DISERTASI

MODEL PENGELOLAAN MANGROVE DI PAPUA BARAT (STUDI KASUS ANDAI, ORANSBARI DAN PULAU RUMBERPON)

Dipersiapkan dan disusun oleh :
Onasius Pieter Moze Matani
1004017029

Telah dipertahankan di depan Dewan Penguji
Pada tanggal..2..4..MAY..2018
Dan dinyatakan telah memenuhi syarat

Susunan Dewan Penguji :

Promotor Utama

Prof. Dr. Ir. Marlon I. Aipassa, M.Agr
NIP. 19580715 198103 1 008

Promotor Pendamping I

Prof. Dr. Ir. Sigit Harwonarto, M. Agr
NIP. 19610202 198603 1 003

Promotor Pendamping II

Dr. Ir. M. Sumaryono, M.Sc
NIP. 19550802 198302 1 003

Anggota Dewan Penguji I

Prof. Dr. Ir. B.D.A.S. Simarangkir, M.A.Sc
NIP. 19480131 197503 1 001

Anggota Dewan Penguji II

Dr. Rujehan, M.P
NIP. 19560919 198103 1 003

Anggota Dewan Penguji III

Dr. H. Syahrir Yusuf, M.P
NIP. 19561222 198610 1 001

Mengetahui

Dekan Fakultas Kehutanan

Dr. Rudianto Amirta, S.Hut.,MP
NIP. 19721025 199702 1 001

Ketua Program Studi
Doktor Ilmu Kehutanan

Dr. Wiwin Suwinarti, S.Hut.,MP
NIP. 19690215 199403 2 003

Lulus Ujian Disertasi : 08 JUN 2018....

Diserahkan Tanggal : 08 AUG 2018....

ABSTRACT

Onasius Pieter Moze Matani. The Management Model of Mangrove Forest Areas In West Papua (Case Study of Mangrove Forest Area Andai, Oransbari and Pulau Rumberpon), guided by Marlon I. Aipassa, SigitHardwinarto and Muhammad Sumaryono.

This study aims to examine the Biophysical and Socio-Cultural Potential, Management Plan and Utilization Form to formulate a Strategy or Management Model for Mangrove Areas according to the conditions of each study area.

The results showed that based on the 2006-2016 land cover map showed that the biophysical conditions in the three locations were still relatively good with land cover above 70%, but specifically the mangrove areas had experienced significant degradation and pressure due to land clearing and high population activities in this region.

The condition of the mangrove vegetation in the three regions was dominated by *Rhizophora* spp. (seedling, sapling and tree levels) both in the mangrove forest of Anda, Oransbari and in Rumberpon Island with different INP values but indicating that the forest area and stands are still quite good. The socio-cultural aspects that affect the three regions are the condition of the population, the level of education, economic conditions, the rule of law and local socio-cultural / customary wisdom that are very influential factors and determine the management and future of the existing mangrove forest area.

The recommendations for the formulation of the Mangrove Area Management Model in the three locations are based on SWOT analysis (Strength, Weaknesses, Opportunities, Threats) and AHP (Analytical Hierarchy Process) are Formation and Optimization of Regional Management Institutions through Regional Planning Documents, Socio-Cultural Values, Government and Community Cooperation to Protecting Regions, Supporting Regional Government and Central Government for Provision of Funds, Infrastructure and Human Resources, and Alternative Interventions for Economic Opportunities for Local Communities and Active Community Engagement in Protecting and Managing Regions.

Key words : *Mangrove, West Papua, Model, Management Plan and Strategy*
